\*An entirely un-researched and pointless news letter on the inaccurate views of Langston Allston-Yeagle

## Cutting Edge: Regin of terror Ends

Tears were seen in the third floor hallway today, tears of joy. As young subfreshamn poured out of their 50 minute imprisonment in science class the cries of those who has just been saved from the edge (even the cutting edge) of death rang through the school. The few subbies left living after the plague of Cutting Edge ravaged their ranks cried tears of sheer joy, and praised their assorted gods and deity's for saving them from the weight of a paper which had slowly crushed their souls. Smoke filled the halls as millions of pages of scientific research and exhaustive BSing were burned in the third floor hallway. Cutting Edge, the cruel tool of Satan used to beat subbies into submission was turned in on this holy day May 2<sup>nd</sup> 2006. Its effects didn't fade away forever though. Ironically, as evil often is, the host of papers about deforestation, erosion, and global warming were single handedly responsible for the destruction of half the amazon rain forest. The constant use of Microsoft Word destroyed much of the earth's ozone layer. More importantly however, there is now a world wide shortage of 12 point Times New Roman font, just the few words in this publication cost trillions of pesos. In fact many of the problems that the world is now experiencing was caused directly by Cutting Edge papers. More touching than the damage to the environment and shortage of materials though, was the loss of life. Erika Belmont committed suicide a day before the paper was due, most likely because of intense stress about an unfinished final draft. Sindha Agha was murdered in the wave of carnage caused by Cutting Edge stress, as was Arnov P. Daniel Kitron killed him self in prison, after he was wrongfully accused of beating Sindha with a wet noodle. Tuli Berra was found drowned in her own tears in front of her computer. Alexx Ingegls, and Nora Peterson ran away from home and were last seen fighting in the Dakota Civil War. Cheyenne Stewart died of a stress related ulcer. Nick Zukoski died from an excess of bottled creativity. Tej was killed in a riot, after he received an A on his first draft he was crushed by the massive weight of his own paper. The all members of the subbie class will remember these poor souls, for the rest of their academic careers.

A joint Cutting Edge burring and wake for souls lost to the horrendous paper will be held later this week.
